ASA Half Stretcher BASIC

Special equipment for the rescue of injured person from a cramped, hard to reach area. This flexible half shells construction provides a good body and head protection and is made of extremely special plastic.

The complete rescue system consists of a carrying bag Cordura – black and another removable bag-PES / yellow PVC, to accommodate an additional breathing air bottle (6,8 litres) and a mask.

The bag Cordura / black, has a palm grip handle and an adjustable looped straps. The bag PES / yellow PVC, for oxygen bomb, is easy to open from above. An easy access into the additional compartment – inside pocket. Side-mounted zipper allowing the carrier (bag Condura) to remain closed. So even on horizontal hoisting of the bag, the oxygen bomb, valves, etc. within the carrier are protected and secure.

Weight	about 3,8 kg (without bottles, etc.)
Dimensions	cca 20×120 cm (rolled and in the bag)
Note	breathing air bottles with accessories , flight PA/mask are not included.
