SKED Rescue System

The SK-200-A is a great solution in closed spaces with difficult access, it serves as technical support in rescuing and extricating the injured. The classic use is pulling on any surface, therefore only one person is sufficient for manipulation. Sked stretchers have a revolutionary design that provides excellent protection and safety for the patient during transport in difficult conditions.

Sked stretchers are equipped with straps, with which it is possible to transport people by helicopter horizontally in a sling and or vertically by pulling, e.g. when extricating from caves, abysses, etc. The stretcher is made of specially resistant plastic.

SK-201	Sked® Body Only
SK-202	Backpack
SK-203	Horizontal Lift Sling (pair)
SK-204	Sked® Tow Strap
SK-205	Removable Webbing handles (set of 4 peaces)
SK-206	Large Locking 'D' Steel Carabiner
SK-207	Sked® Vertical Lift Sling (30 ft rope)
